Summary

AI Engineer experienced in building and deploying LLM and multimodal AI systems end-to-end, from fine-tuning and inference to deployment-ready ML infrastructure on AWS. Skilled in agentic AI, RAG, LangChain, and modern LLM tooling. Actively seeking new opportunities.

Work Experience

AI Engineer

Munich, Germany

COBY - THE COPING BUDDY

Apr. 2025 - Feb. 2026

- Developed and deployed an LLM-powered AI companion application, integrating open-source language models into the application and taking models from experimentation through fine-tuning, inference, and deployment.
- Fine-tuned **5+** open-source large language models on a **~2K** proprietary child-AI dialogue dataset using LoRA/PEFT, developing custom training scripts and managing end-to-end training workflows with AWS SageMaker and Amazon S3.
- Set up and maintained GPU-based LLM inference on AWS EC2, configuring model-serving applications with FastAPI and Uvicorn and managing model deployment, compute resources, and runtime environments.
- Troubleshooted and resolved infrastructure issues during training and inference, including Python dependency conflicts, CUDA compatibility, GPU resource constraints, and AWS quota limitations.

AI Research Student

Kaiserslautern, Germany

SMARTFACTORY

Jan. 2024 - Mar. 2025

- Developed a multimodal AI system for manual assembly assistance, exploring vision-language models including Moondream and ultimately fine-tuning LLaVA with LoRA/PEFT.
- Built and annotated a custom multimodal dataset of **~100** assembly images with question-answer pairs, and implemented the training pipeline using PyTorch, Hugging Face Transformers, PEFT, BitsAndBytes, and DeepSpeed on NVIDIA H100 GPUs.
- Developed and integrated a REST API for LLaVA inference, containerizing the model with Docker and connecting the fine-tuned model to an interactive application for delivering step-by-step assembly guidance.

Working Student – Software Development

Kaiserslautern, Germany

IT FOR ENGINEERING (IT4E GMBH)

Jan. 2022 - May. 2023

- Developed front-end features and contributed to UI improvements using React, TypeScript, HTML, and CSS, working closely with the team to implement product requirements.

Education

M.Sc. in Embedded Systems

Kaiserslautern, Germany

RHEINLAND-PFÄLZISCHE TECHNISCHE UNIVERSITÄT KAISERSLAUTERN

Oct. 2021 - Feb. 2025

Thesis Title: Fine-Tuning Multimodal Large Language Models for Enhancing Manual Assembly Tasks in Industrial Settings

B.Sc. in Electrical Engineering

Tehran, Iran

AMIRKABIR UNIVERSITY OF TECHNOLOGY (TEHRAN POLYTECHNIC)

Sep. 2016 - Jun. 2021

Thesis Title: Facial Expressions Recognition Using Deep Convolutional Neural Networks (DCNN)

Projects

Job Fit Agent

PERSONAL PROJECT

Jun. 2026 - present

- Built an LLM-powered agent for automated job-candidate matching, engineering an end-to-end pipeline that parses PDF CVs and extracts job postings from the web to evaluate experience alignment, skill gaps, and application priorities.
- Developed and deployed a Gradio application using Llama 3.3 70B via the Groq API, integrating BeautifulSoup and pypdf for web-based job extraction and PDF document parsing, with robust handling of malformed inputs and API failures.

Skills

Programming

Python

AI & Agentic AI

LLMs, Agentic AI, Google ADK, LangChain, Hugging Face Transformers, PEFT (LoRA/QLoRA)

Frameworks & Tools

PyTorch, FastAPI, Docker, Git, Gradio, CUDA

Cloud & Platforms

Amazon Web Services (AWS), Hugging Face

Additional

Languages

English (C2); German (B1); Persian (Native)

Honors

Top 0.3% among 180,000+ participants, Iran National University Entrance Exam
